2. Citations and explanations

The invention pertains to heat dissipation in mobile radio devices.

The method, the mobile radio device and the use are defined in independent claims in terms of a combination of features which is not known from the prior art. There is no hint of the use of a corrugated or honeycomb-structured metal foil with a cooling body.

The subject matter of independent claims 1-3 therefore complies with the requirements of PCT Article 33(2) to (4).

The description has not been brought into line with the newly filed claims.
